

**The Department of Chemistry together with the Faculty of Science and Technology invites you to two seminars with**

## **Dr. Nicole Lapeyrouse**

**University of Central Florida, Division of Chemical Education**

### **Investigating students' STEM identity at a large Hispanic Serving Institution**

May 5, 11.30 – 13.00 in Stora fokusrummet, KBF301, KBC

There will be a light lunch (salad) offered, first come first served! It's also possible to bring your own lunch or buy at the KBC café.

### **Investigating Student Perception of Unique Multimedia for large enrollment courses and creating an Open Education Resource**

May 8, 14.00 – 15.30 in Glasburen, KBC

We offer fika, bring your own drink

As part of the development work around digitalized teaching material at the Department of Chemistry, we have invited Dr. Nicole Lapeyrouse, University of Central Florida, for knowledge, inspiration, and practical support in the work of producing recorded teaching material. Nicole is an experienced teacher with chemistry skills and extensive experience and knowledge related to recorded teaching materials and digital aids, which makes her an excellent resource for how to concretely make high-quality digital teaching materials with relevant content.

We welcome staff involved in teaching at the faculty's departments to participate in the two seminars. No registration is required, just show up.
